DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Clark (U.S. Pat. 6,843,967).

Regarding claim 1, Clark teaches a curing chamber provided to house polymerizable dental material. The apparatus utilizes light emitting diodes (LEDs) to radiate energy to polymerize the dental materials. The LEDs are positioned optimally within the curing apparatus to provide efficient, effective polymerization of the dental materials. (See Abstract) Figs. 1-8 shows the curing chamber. (See Figs. 1-8) In Fig. 4 LEDs are located on the floor of the chamber. The LEDs may be covered by a transparent protective cover. In Fig. 5 a dome cover is shown with LEDs mounted in cover 24 so that light is transmitted directly from the LEDs to the material being cured. LEDs may be mounted continuously as shown or in a variety of different patterns, as desired. (Column 3 lines 24-45)

Regarding claim 2, the array of LEDs is mounted on an interior surface of the hemisphere (i.e. see circles located on interior of dome). (See Fig. 5; Claim 2-5)
